User manual Car for Toyota 2012 COROLLA Table of contents Before driving When driving Interior features Maintenance and care When trouble arises Vehicle specifications For owners Index Electronic key battery depletion The standard battery life is 1 to 2 years. The battery becomes depleted even if the electronic key is not used because the key always receives radio waves. If the smart key system or the wireless remote control function does not operate, or the detection area becomes smaller, the battery may be depleted. Replace the battery when necessary. (—P. 385) If the battery becomes low, an alarm will sound in the cabin when the engine stops. (—P. 32) Note for the smart key system Even when the electronic key is within the effective range (detection areas), the system may not operate properly in the following cases. The electronic key is too close to the window or outside door handle, near the ground, or in a high place when the doors are locked or unlocked. The electronic key is near the ground or in a high place, or too close to the rear bumper center when the trunk is unlocked. The electronic key is on the instrument panel, package tray, floor, or in the auxiliary box of the driver's side instrument panel or glove box when the engine is started or "ENGINE START STOP" switch modes are changed. Using the trunk Observe the following precautions. Failure to do so may cause parts of the body to be caught, resulting in serious injury. Remove any heavy loads, such as snow and ice, from the trunk lid before opening it. Failure to do so may cause the trunk lid to fall closed again after it is opened. When opening or closing the trunk lid, thoroughly check to make sure the surrounding area is safe. If anyone is in the vicinity, make sure they are safe and let them know that the trunk is about to open or close. Use caution when opening or closing the trunk lid in windy weather as it may move abruptly in strong wind. The trunk lid may fall if it is not opened fully. It is more difficult to open or close the trunk lid on an incline than on a level surface, so beware of the trunk lid unexpectedly opening or closing by itself. Make sure that the trunk lid is fully open and secure before using the trunk. When closing the trunk lid, take extra care to prevent your fingers etc. from being caught. When closing the trunk lid, make sure to press it lightly on its outer surface. Do not attach any accessories other than genuine Toyota parts to the trunk lid. Such additional weight on the trunk lid may cause the lid to fall closed again after it is opened. Seat adjustment Be careful that the seat does not hit passengers or luggage. Do not recline the seat more than necessary when the vehicle is in motion to reduce the risk of sliding under the lap belt. If the seat is too reclined, the lap belt may slide past the hips and apply restraint forces directly to the abdomen or your neck may contact the shoulder belt, increasing the risk of death or serious injury in the event of an accident. Manual seat only: After adjusting the seat, make sure that the seat is locked in position. Automatic cruise control cancellation Cruise control will stop maintaining the vehicle speed in any of the following situations. Actual vehicle speed falls more than approximately 10 mph (16 km/h) below the preset vehicle speed. At this time, the memorized set speed is not retained. Actual vehicle speed is below approximately 25 mph (40 km/h). VSC is activated. Steps for Determining Correct Load Limit Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard. Determine the combined weight of the driver and passengers that will be riding in your vehicle. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 - 750 (5 × 150) = 650 lbs.) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
